## WORK ALL FOUR PROBLEMS

## ODE PART

1. (25 pts) Consider the nonlinearly damped mass-spring system

$$
\begin{equation*}
m \frac{d^{2} x}{d t^{2}}+f\left(x, \frac{d x}{d t}\right) \frac{d x}{d t}+\lambda x=0 \tag{1}
\end{equation*}
$$

with $\lambda, m>0$ and smooth $f\left(x, x^{\prime}\right) \geq 0$ in a neighborhood of the origin in the $(x, y)$ phase plane (i.e. with $y=d x / d t$ ).
(a) (15pts) Show that the non-negative function

$$
\begin{equation*}
V(x, y)=\frac{1}{2}\left(\lambda x^{2}+m y^{2}\right) \tag{2}
\end{equation*}
$$

is a weak Lyapounov function for equation (1)
(b) (5 pts) Use the result in part (1) to show that the zero solution is stable.
(c) ( 5 pts ) Is the zero solution always asymptotically stable?
2. ( 25 pts ) Consider the system

$$
\begin{equation*}
\mathbf{x}^{\prime}=P(t) \mathbf{x}, P \in R^{n}, P(t+T)=P(t), \tag{3}
\end{equation*}
$$

with $P(t)$ continuous and real $T>0$.
(a) (5pts) State (without proof) the Floquet theorem for this system, and discuss its implications for the existence of periodic solutions.
(b) (10 pts) Given the $2 \times 2$ system

$$
\frac{d \mathbf{x}}{d t}=P(t) \mathbf{x}, \mathbf{x}=\binom{x_{1}}{x_{2}}, P(t)=\left(\begin{array}{rr}
-\sin 2 t & \cos 2 t-1  \tag{4}\\
\cos 2 t+1 & \sin 2 t
\end{array}\right)
$$

Show that a Fundamental matrix is given by

$$
\Phi(t)=\left(\begin{array}{rr}
e^{t}(\cos t+\sin t) & e^{-t}(\cos t+\sin t)  \tag{5}\\
e^{t}(\cos t-\sin t) & -e^{-t}(\cos t-\sin t)
\end{array}\right)
$$

(c) ( 5 pts ) Find the characteristic numbers $\mu_{i}, i=1,2$ for the system in part b, so that there exist solutions of the form (with $T$ the period of $P$ ):

$$
\begin{equation*}
\mathbf{y}_{i}(t+T)=\mu_{i} \mathbf{y}_{i}(t), i=1,2 . \tag{6}
\end{equation*}
$$

(d) (5 pts) Does the system in (part b) have a periodic solution? If yes, what is its period? If no, why not?

## PDE PART

1. ( 25 pts ) Solve the initial value problem

$$
\begin{equation*}
u_{t}+u_{x}=u^{2}, \quad u(x, 0)=\frac{1}{2} \cos x \tag{7}
\end{equation*}
$$

and determine the largest time $T>0$ for which $u(x, t)$ is finite for

$$
\begin{equation*}
-T<t<T, \quad-\infty<x<\infty . \tag{8}
\end{equation*}
$$

2. ( 25 pts ) Solve the initial value problem

$$
\begin{equation*}
u_{t t}=u_{x x}-3 u, \quad u(x, 0)=\cos x, \quad u_{t}(x, 0)=\sin x . \tag{9}
\end{equation*}
$$
