1.6-1.7: Absolute Value Equations and Inequalities

|x| means "distance that x lies from zero" on the real number line

6. Translate each mathematical statement into a "meaningful" English statement. Draw a picture, then solve for x.

7. Consider y < -3 or y > 3. Draw a graph that represents this statement, then write it as an absolute value statement.

-3	0 3	

8. To solve 2|x - 4| + 1 = 7, what are the steps?

Step 1: SOLATE abs. val.

2|x-4| = 6 |x-4| = 3Step 2: LOSE abs val appropriately x-4 = -3 or x-4 = 3 $x = 1 \qquad x = 7$ The quantity inside the absolute value lies 3 units from 0, so equals 3 or -3.

9. To solve each inequality, what are the steps? Write solutions using interval notation.

(a) 2|x - 4| + 1 < 7Step 1: |SOLATE abs. vaQ 2|x - 4| + 1 > 7Step 1: |SOLATE abs. vaQ 2|x - 4| - 4| + 1 > 7Step 1: |SOLATE |x - 4| - 3Step 2: Quantity inside absolute value lies less than Step 2: Quantity inside the absolute value is more than 3
