

Obituary: Eugenio Roanes-Lozano¹

By Angélica Martínez, José Luis Galán García and Francisco A. González Redondo

Past Sunday, April 16, 2023, we learned the painful and unexpected news of the death of

Eugenio Roanes-Lozano at the age of 60. Professor in the Department of Didactics of Experimental, Social and Mathematical Sciences of the Faculty of Education-Teacher Training Center of the Complutense University of Madrid and PhD both in Mathematics and in Computer Science, he has always been highly motivated by research at the highest level and by the teaching of Mathematics, as well as the integration of both aspects.

His numerous publications on applications of Computer Algebra in Mathematics Education, Transportation Engineering and Artificial Intelligence and several books on the use of computers in Mathematics stand out. His great research work, endorsed by five six-year, officially recognized by Spanish administration, research periods, is complemented by being a member of various scientific committees, a member of the editorial boards of high-impact journals, a member of the Board of Directors of the "Puig Adam" Society of Mathematics Teachers, as well as as editor of various special issues in high-impact journals, principal investigator of research and innovation projects, director of university-company projects in transportation engineering and educational software development, "General Chairman" of international congresses, director of doctoral theses, and many other contributions that have shaped a powerful and excellent professional career. His career as a university professor was endorsed with successive awards for teaching excellence.

In addition to all of the above, Eugenio's most important characteristic must be highlighted: his enormous humanity. His main passions have been his family and his friends, tennis, trains, and Mathematics. His family, his friends and his colleagues have been able to count on him in both good and bad times, where he always had those exact words that comforted the soul. Eugenio was big and strong in every way. His constant smile, his kindness, his generosity, and his great capacity for work, defined him.

The words "Eugenio has left" have invaded the hearts of all of us who have known him. It was not the time to catch the last train. There were numerous family, personal and professional projects that he had to live. There are many of us family, friends, and colleagues who wish we could have continued enjoying his company. How much we will miss you! How much we miss you already! But Eugenio has not left for good. He will surely remain in a prominent place in the hearts of all of us.

Eugenio, good trip and rest in peace.
